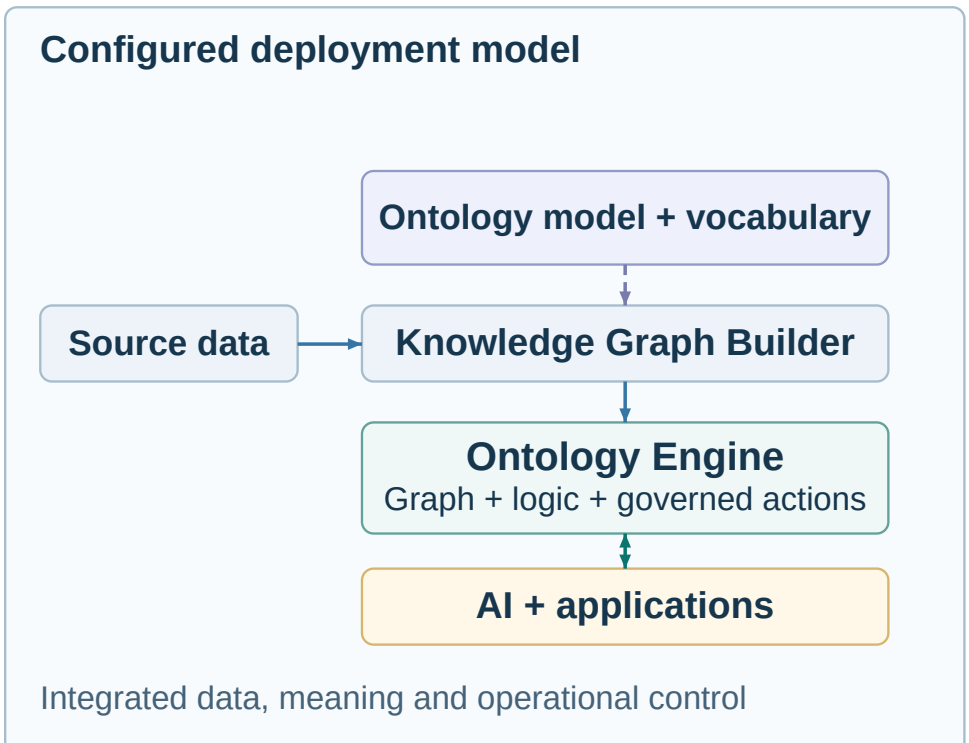
Operational ontology: a different cooperation boundary

Make the model explicit. Build the graph. Connect AI to governed action.

Enterprise / platform-centred focus

Documented Palantir pattern

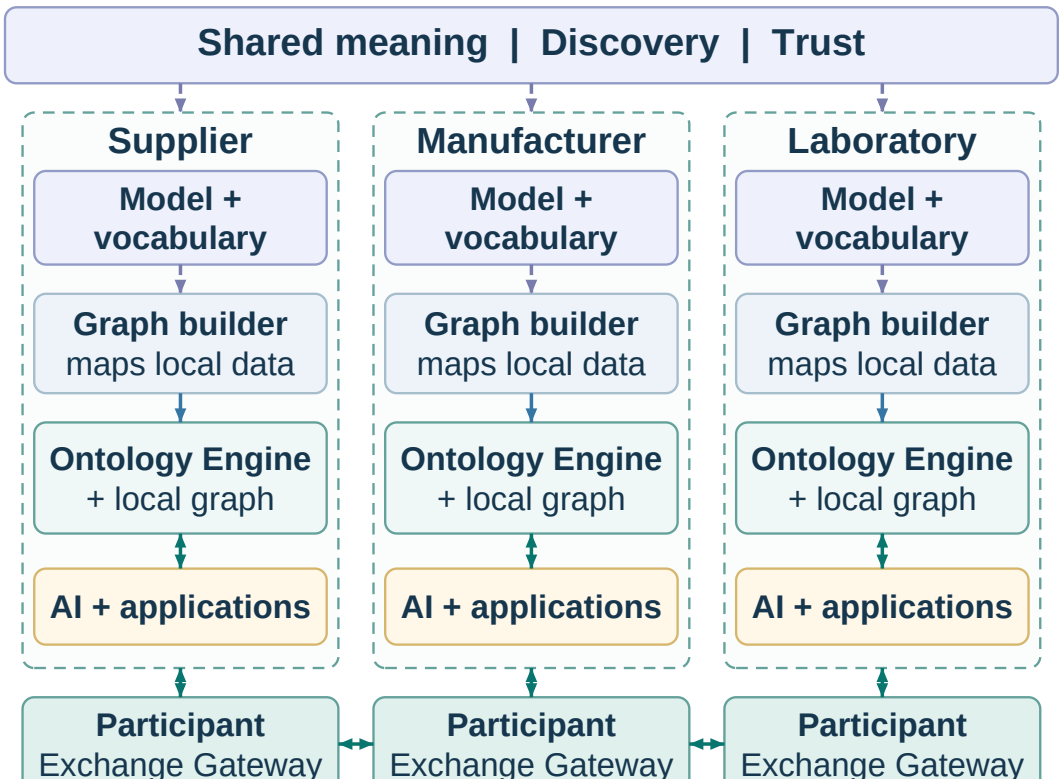


Multiple organizations supported.

No universal closed-world assumption is asserted.

Open-world ecosystem focus

Proposed cross-company meta-platform



Agreed semantics + attributable claims + authorized exchange

Missing does not mean false; local decision gates remain.

Dashed: model / metadata dependencies. Solid: local processing or permitted exchange.

Next step: operational ontology across independently governed participants.
