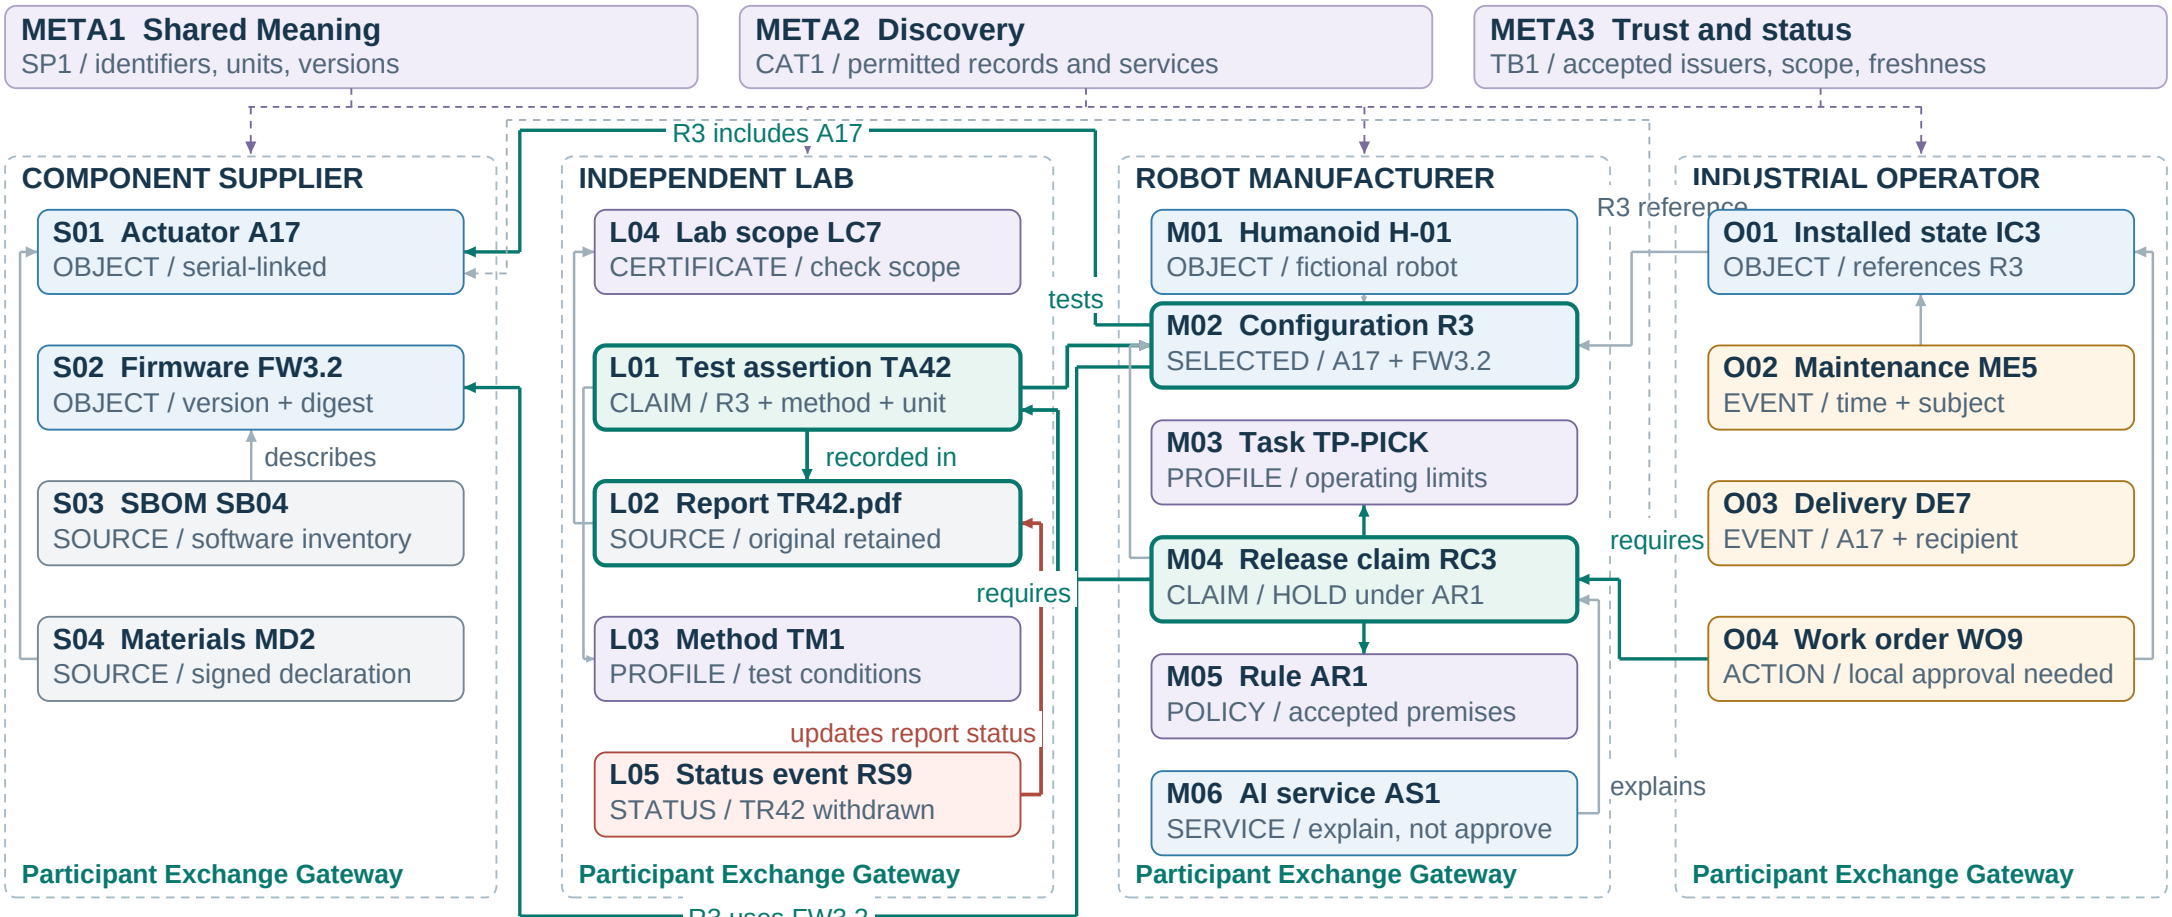
A humanoid robot is a network of evidence, not one certificate

Synthetic H-01 example: follow a configuration, its supporting sources and the consequences of a withdrawn report.



WHAT CHANGES? **TR42 is withdrawn. AR1 no longer accepts TA42 as a current premise.**

RC3 becomes HOLD; review dependent assessments and WO9. Keep the original report and prior decision history.

HOLD does not mean the robot is unsafe or legally noncompliant. Each participant retains disclosure and action authority.

Teal = selected dependency path; red = status change; grey = context; dashed purple = metadata. All records and outcomes are synthetic.
